

# iPhone 13

The iPhone 13 is Apple's 2021 smartphone that balances performance, battery life and design. It has a bright Super Retina display, Apple's A15 Bionic chip for smooth everyday use and good camera systems that take sharp photos and stable video. Battery life is noticeably better than earlier models, and the build feels solid with a modern look. It's a reliable choice if you want a capable iPhone without the latest Pro-level features.

| Feature                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Display</b>              | 6.1-inch Super Retina XDR OLED screen with a resolution of 2532×1170 and about 457 ppi. It delivers rich colors, deep blacks, wide contrast, HDR10 and Dolby Vision support, and up to 1200 nits peak brightness for better outdoor visibility. The screen has a scratch-resistant Ceramic Shield front with an oleophobic coating to reduce fingerprints. Refresh rate is standard 60 Hz, tuned for color accuracy and clarity. |
| <b>Processor (Chip)</b>     | Powered by Apple's A15 Bionic chip built on a 5 nm process. It includes a six-core CPU (two high-performance cores and four efficiency cores) and a four-core GPU for smooth graphics. This chip handles demanding tasks, gaming, and machine-learning features efficiently while balancing battery life.                                                                                                                        |
| <b>Memory &amp; Storage</b> | Comes with 4 GB of RAM and internal storage options of <b>128 GB, 256 GB, or 512 GB</b> . There is no memory card slot, so storage is fixed at purchase. Larger storage options help with media and app storage.                                                                                                                                                                                                                 |
| <b>Operating System</b>     | Ships with iOS 15 but supports later iOS versions through updates. iOS provides a smooth, secure interface with regular feature and security updates directly from Apple.                                                                                                                                                                                                                                                        |
| <b>Rear Cameras</b>         | Dual 12 MP camera system. The main wide lens has sensor-shift optical image stabilization (OIS) for steadier photos and video, and the ultra-wide captures broader scenes and landscapes. Both lenses support HDR, Night mode, and detail-rich photos even in lower light.                                                                                                                                                       |
| <b>Front Camera</b>         | 12 MP TrueDepth front camera with wide aperture, HDR support, and 4K video recording capability. It supports features like Portrait mode, Night mode, and Face ID.                                                                                                                                                                                                                                                               |

|                                  |                                                                                                                                                                                                                                                                                |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Video Capabilities</b>        | Can record video up to <b>4K at 60 fps</b> , including slow motion and time-lapse modes. It also supports Dolby Vision HDR capture for richer color and detail in video content.                                                                                               |
| <b>Battery &amp; Charging</b>    | Built-in 3240 mAh lithium battery with fast wired charging (up to roughly 50 % in about 30 min with an appropriate adapter), <b>MagSafe wireless charging up to 15W</b> , and Qi wireless charging. Efficient hardware and software help balance performance and battery life. |
| <b>Connectivity</b>              | Supports <b>5G, Wi-Fi 6, Bluetooth 5.0, NFC</b> for Apple Pay, and GPS with GLONASS, Galileo, and QZSS systems. Dual SIM (nano-SIM + eSIM) configurations are available in some regions. USB uses the <b>Lightning</b> port.                                                   |
| <b>Security &amp; Biometrics</b> | <b>Face ID</b> facial recognition for secure unlocking, Apple Pay authentication, and app access. Face ID uses the front TrueDepth camera system.                                                                                                                              |
| <b>Build &amp; Durability</b>    | Glass front (Ceramic Shield), glass back, and aerospace-grade aluminum frame provide a premium feel. The device has <b>IP68 water and dust resistance</b> , meaning it can withstand immersion in water at certain depths and durations.                                       |
| <b>Audio</b>                     | Stereo speakers with spatial audio support for immersive sound playback. There's no traditional 3.5 mm headphone jack; wired audio uses the Lightning port with an adapter.                                                                                                    |
| <b>Sensors</b>                   | Includes accelerometer, gyro, proximity sensor, barometer, and ambient light sensor. These assist with motion tracking, screen brightness adjustment, navigation, and app interactions.                                                                                        |
| <b>Colors</b>                    | Available in several finishes like Starlight, Midnight, Blue, Pink, and (PRODUCT)RED, letting users pick a look that fits their style.                                                                                                                                         |
| <b>Software Features</b>         | iOS brings features like iMessage, FaceTime, Siri, widgets, App Library, privacy controls, and regular updates from Apple. iOS integration with devices like Apple Watch, AirPods, and Mac makes the ecosystem seamless.                                                       |
