

iPhone 14

The iPhone 14 is Apple's 2022 mainstream iPhone model that balances performance, camera quality, and battery life in a familiar design. It has a 6.1-inch Super Retina XDR OLED display with rich colors and HDR support, protected by Ceramic Shield glass. Under the hood it runs on the A15 Bionic chip with a 5-core GPU for smooth everyday performance, gaming, and efficient battery use. The dual 12 MP rear cameras (wide and ultra-wide) and a 12 MP front TrueDepth camera capture sharp photos and 4K video, with features like Cinematic mode and Action mode for steady footage.

Feature	Detailed Description
Display	6.1-inch Super Retina XDR OLED panel with 2532×1170 resolution (~460 ppi), HDR10 and Dolby Vision support, 1200 nits peak brightness for bright outdoor viewing, True Tone for natural color balance, and an oleophobic coating to reduce fingerprints. It's protected by Ceramic Shield glass for improved durability.
Build & Durability	Glass front and back with an aluminum frame and IP68 water/dust resistance (can survive submersion in water up to 6 m for about 30 minutes), giving a premium look and solid protection against splashes and dust.
Chip & Performance	Powered by the A15 Bionic chip with a six-core CPU (2 performance + 4 efficiency cores), a 5-core GPU for graphics, and a 16-core Neural Engine for machine learning and smart features. This chip delivers efficient performance for everything from daily use to gaming and AI tasks.
Operating System	Runs iOS with long-term updates from Apple, offering a seamless interface, strong privacy controls, and integration with other Apple devices. Originally shipped with iOS 16 and upgradable to later versions.
Memory & Storage	Available in 128GB, 256GB, or 512GB storage options. It typically includes 6GB of RAM , so apps, photos, and videos load smoothly. There's no microSD slot, so internal storage is fixed.
Rear Cameras	Dual 12 MP camera system: main wide with sensor-shift optical image stabilization (OIS) and ultra-wide lens for broader scenes. Supports Smart HDR 4, Deep Fusion, Night mode , and computational photography improvements from Apple's Photonic Engine.

Front Camera	12 MP TrueDepth selfie camera with autofocus, Portrait mode, Night mode, and 4K video recording. It also supports HDR and True Tone flash for clearer selfies in different lighting.
Video Recording	Can record 4K video up to 60 fps , HDR with Dolby Vision, Cinematic mode at 4K/30 fps, Action mode for smooth handheld video, slo-mo video up to 240 fps, and time-lapse with stabilization.
Battery & Charging	Built-in Li-ion battery (~3279 mAh) with fast wired charging (up to ~50 % in ~30 min), MagSafe wireless charging up to 15 W, and Qi wireless support. Battery life is optimized through hardware and software features.
Connectivity	Supports 5G , LTE, Wi-Fi 6, Bluetooth 5.x , NFC for Apple Pay, GPS with multiple satellite systems, and FaceTime over cellular or Wi-Fi. Uses the Lightning port for charging and data.
Security & Biometrics	Face ID facial recognition for secure unlocking and authentication, protected by Apple's secure enclave for privacy and security.
Audio	Stereo speakers with spatial audio support for immersive sound during video playback and calls. No 3.5 mm headphone jack; wired audio uses Lightning with an adapter.
Sensors	Includes accelerometer, gyroscope, proximity sensor, ambient light sensor, barometer, and a depth/biometric sensor in the TrueDepth system. These help with screen rotation, motion detection, navigation, and accurate Face ID.
Emergency & Safety Features	Emergency SOS via satellite (for sending messages when cellular is unavailable) and Crash Detection to alert emergency services after severe impacts (feature support may vary by region and carrier).
Colors & Design Options	Available in colors like Midnight, Starlight, Blue, Purple, and (PRODUCT)RED, with a design that emphasizes a clean front screen and slim profile.
